

Fullaxs Series Waterproof Connectors

Product Description

Designed to meet the outdoor connectivity design requirements of next-generation WiMAX and Long Term Evolution (LTE) fiber-to-antenna (FTTA) technologies, the FullAXS connector, a system that provides SFP links between base stations for remote radio and telecom applications, was introduced by TE Connectivity (Tyco). The product is compatible with a wide range of SFP transceivers on the market, allowing end users to select the transceiver that meets their specific system requirements.

Features

Fullaxs through the introduction of the market has been unanimously praised, the connector is easy to operate, high waterproof performance, up to IP68 level. After being widely used in a variety of outdoor fiber optic equipment fiber optic ports, especially Ericsson's communications equipment is most widely used. In order to meet market demand, TE has launched other styles of Fullaxs series, some of the market, other communications manufacturers, also launched a series of waterproof connectors to match the Fullaxs mounting base to meet market demand. The following are some of the other brands of waterproof connectors to match the Fullaxs port.
